Spatial Information

AOC is South Africa's first full service spatial information company. Our advanced capabilities are built upon the core disciplines of surveying, aerial survey, mapping, data modelling and geographic information systems.

We provide a range of advanced systems for the collection, storage, analysis and presentation of spatial information.

Our leading position is reflected by the growing list of South African and international clients utilising our resources and environmental industry experience.

Applications

- Flood Modelling
- Environmental Planning
- Remnant Vegetation Mapping
- Community Consultation
- Engineering Design
- Change Detection
- Habitat Analysis
- Rehabilitation Assessment
- Risk Discovery & Mitigation

Experience

AOC has two office locations in South Africa and operates in Australia, New Zealand and South East Asia.

AOC has a culture of inquiry, sound scientific foundation, client-focused management, passion for excellence and professional values.

Safety & Sustainability

Safety and sustainability are corporate priorities. All staff embrace safety in every aspect of professional practice. This appreciation for safety is evident in our uncompromising standards and reflected in our excellent safety record. We believe that quality spatial information supports sustainable decision making.

Imagery:	film or digital aerial photography: colour infrared and natural colour, airborne laser scanning, thermal sensing and satellite
Modelling:	digital terrain, tree canopy
Mapping:	orthophotos, vector capture
GIS:	application development
